

Press Release

Central Agency for Public Mobilization And Statistics

On the Occasion of the world Meteorological Day 7.5% decrease in the amount of carbon dioxide emissions resulting from domestic consumption of petroleum products and natural gas in 2019/2020 compared with 2018/2019

Central Agency for Public Mobilization and Statistics issued on Tuesday 23 / 3 / 2021

A press statement on the occasion of the World Meteorological Day, which is celebrated on the twenty-third of March each year.

Since the establishment of the World Meteorological Organization and starting implementation of meteorological agreement, to help countries to preserve environment and achieve sustainable development, Celebration will be held this year 2021 under the theme " The Ocean, Our climate and weather "

This theme is in line with the international community trend towards taking ambitious decisions and measures to address climate changes that affect all economic, social and environmental sectors, that threaten sustainable development path.

The most important of these indicators: -

- Quantity of domestic consumption of natural gas reached 44835.2 thousand tons in 2019/2020, versus 46450.6 thousand tons in 2018/2019, an decrease by 3.9%.

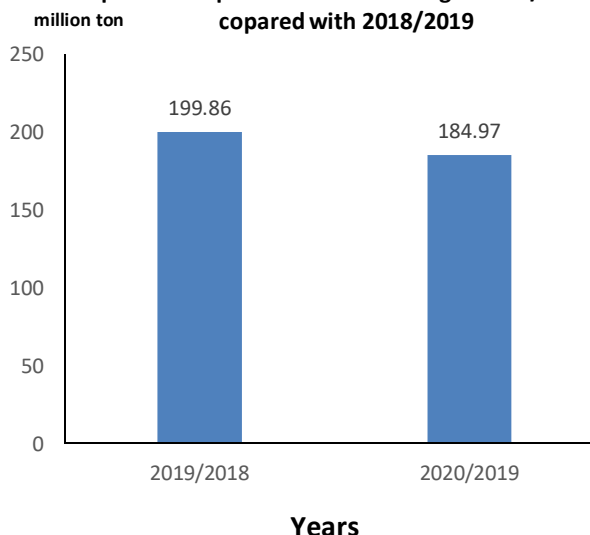

Quantity of domestic consumption of petroleum products reached 27540 thousand tons in 2019/2020, versus 30950.1 thousand tons in 2018/2019, a decrease by 11%.

Amount of domestic consumption of petroleum products and natural gas During the period (2015/2016 - 2019/2020)

A decrease in the total amount of carbon dioxide emissions resulting from domestic consumption of petroleum products and natural gas from 199.86 million ton in 2018/2019 to 184.97 million-ton 2019/2020 with a decrease percent of 7.5%

The amount of carbon dioxide emissions resulting from domestic consumption of petroleum products and natural gas 2019/2020 compared with 2018/2019

- **Total quantity of generated electric power from new and renewable energy (wind / solar energy) was 4543 GWh in 2018/2019 versus 2871 GWh in 2017/2018, an increase by 58.2%. Data from International Energy Agency refers to that Egypt Contribution to generating energy from new and renewable sources represents 15% of total production at the African continent level in 2018 compared with 17% in 2017.**

Development of generated electric power from new and renewable energy (wind / solar) During the period (2012/2013 - 2018/2019)
