

Press Release

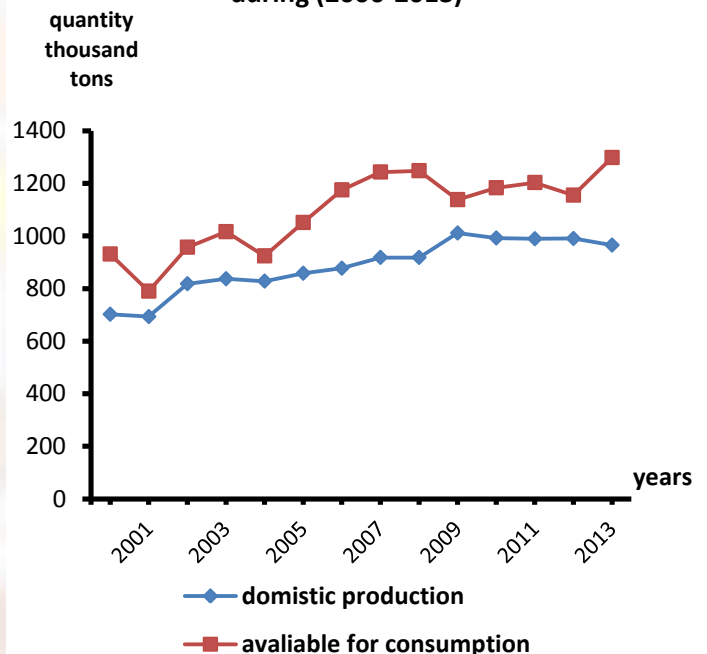

Central Agency for Public Mobilization And Statistics

81.4 % is the Average self-sufficiency ratio of red meat during (2000- 2013)

Central Agency for Public Mobilization (CAPMAS) and Statistics released on ٢٧/8/2015 a study of " Economics of red meat in Egypt". The most important indicators are:

- Heads of cattle increased from 14.9 million heads in 2000 to 18.5 million head in 2013 by 24%, of which 25.6% cows, 21.1% buffalos, 30% sheeps, 22.4%goats, and 0.8% camels of the total in 2013.
- The quantity of domestic production of red meat increased from 702 thousand tons in 2000 to 965 thousand tons in 2013, by 37.5%, while the quantity of available for consumption of red meat increased from 931 thousand tons to 1298 thousand tons by 39.4% during the same period.
- Self-sufficiency ratio of red meat decreased from 75.4% in 2000 to 74.3% in 2013, by 81.4% on average during (2000-2013), and the gap between production and available for consumption increased from 229 thousand tons to 333 thousand tons during the same period.

Trend of the domestic production and available for consumption of red meat during (2000-2013)

- Average per capita of domestic production of red meat in the world is 11.3 kg / capita / year on 2013, it raised to 104.5 kg in the Oceania countries, while it declined in Africa to reach 8.3 kg. It reached 11.9 kg in Egypt in 2013.

- The average of domestic red meat prices in Egypt increased from 17 pounds / kg in 2000 to 67.7 pounds / kg in 2013 by 298.2%.

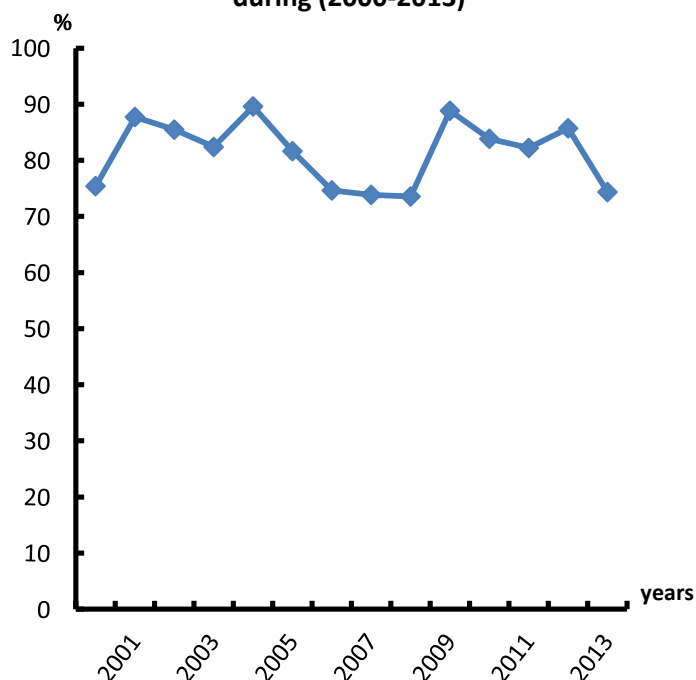

- The average of annual needs for livestock from fodder in Egypt is at about 40.4 million tons of green fodder, 9.7 million tons of straws, and 16.1 million tons of concentrated feeds during (2004 - 2013).

- The deficit of average available for consumption of concentrated feed and cereals about needs is 7.6 million tons

during (2004-2013), while there is a surplus in the green fodder about to 18.9 million tons, which makes livestock breeders depend on the green fodder due to the rise of concentrated feeds and cereals prices.

- Operating factories for the production of cattle feed reached 150 factories in 2013. Their total capacity is 4.4 million tons, actual production is 1.1 million tons, and unused capacity is 74.8% of the full capacity.

Trend of self-sufficiency of red meat during (2000-2013)

- It is expected that the available for consumption of red meat will increase to 1340.8 thousand tons in 2018, by 10.8 thousand tons average annual increasing during (2014 - 2018).
- It is expected that the deficit in the red meat production will increase during (2014 - 2018) to reach 396.8 thousand tons in 2018 by an average increase of 19.3 thousand tons.
- It is expected decreasing average per capita of available for consumption of red meat during (2014 - 2018) to reach 14.6 kg/year in 2018, with an average decrease of 0.1 kg /year, this decline is due to the continuing increase in population, which was not met by parallel growth in livestock that maintains per capita share.
