

Egypt ranked 60th in terms of Water Quantity among World's Countries

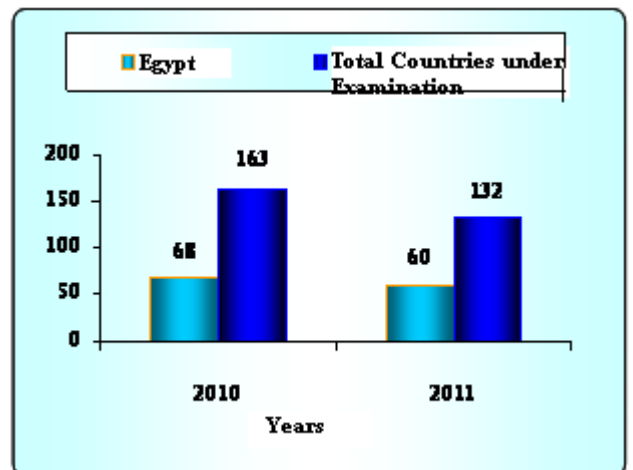

CAPMAS issued on Wednesday 21/3/2012 a press release on World water day, which fixed on 22 March per every year.

The slogan of this celebration comes this year under the name of (Water and Nutrition Insurance). It aims at highlighting the international intention of Water influence on Nutrition insurance and provides it for the nations, preserve & insure of water to be accessed in high quality for all citizen.

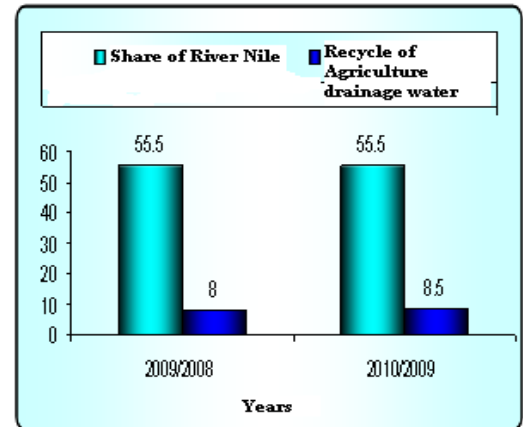

CAPMAS release annual environmental report, which include an important chapter on Water Statistics.

Its most important indicators are:

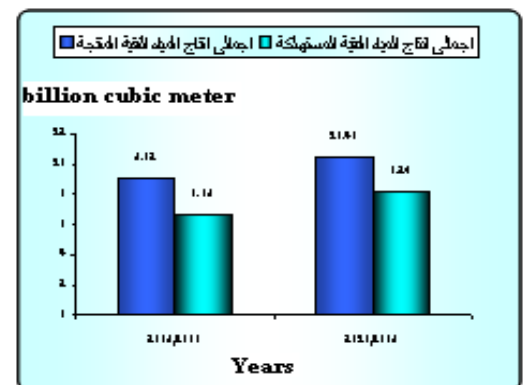

- Improve Measure Indicator of Quality of Water, where Egypt ranked 60th of total countries which get through a test examination counted with 132 country from year 2011 versus the rank 68 in 2010 which reflects a significant improvement to measure Quality of Water in Egypt compared to World's Countries. This according to the latest evaluation published by Environmental Research Center in (Yale) US University and issued on January 2012.

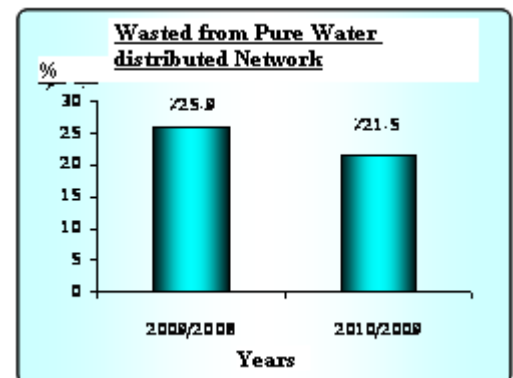

- River Nile consider to be the Main Source for water in Egypt, where its share reached to 55.5 billion cubic meter share in 75.9% annually o total Water resources, which represented in ground water in valley and delta, recycle drainage water of Agriculture and health, in addition to rain water and sea water desalination.

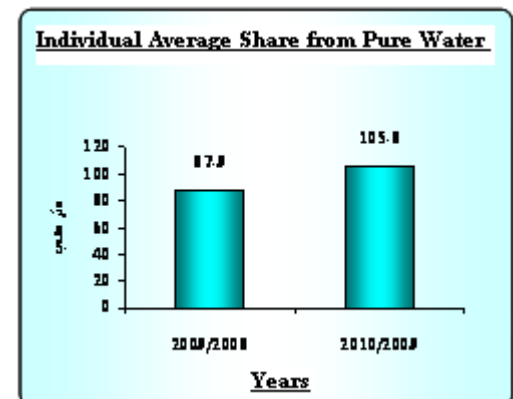

- Quantity of Water drainage of Agriculture that has been recycled reached 8.5 billion cubic meter in 2009/2010 versus 8 billion cubic meter in 2008/2009 with an increase 6.25%.

- Produced quantity of Pure Water reached 10.48 billion cubic meter in 2009/2010 versus 9.02 billion cubic meter in 2008/2009 with an increase 16.2%.

- Consumed quantity of Pure Water reached 8.23 billion cubic meter in 2009/2010 versus 6.68 billion cubic meter in 2008/2009 with an increase 23.2%.
- Proportion of Wasted in Pure Water distribution Network reached to 21.5% in 2009/2010 versus 25.9% in 2008/2009 of total produced quantity of water.

- Average share per capita from consumed of Pure Water reached 105.8 billion cubic meter in 2009/2010 versus 87.9 billion cubic meter in 2008/2009 with an increase 20.4%, resulted from the increased produced quantity of pure water with decreasing the proportion of wasted from water distribution networks.
- Agriculture Sector represented the largest consumption of water in Egypt, where it reached to 60.5 billion cubic meter in 2008/2009 with an increase 0.8%.
- Connected household with public network water facilities reached to 16.7 million household with 96.6 % (according to census data 2006).
