

Release the Social Accounting Matrix of Egypt

(SAM 2010/2011)

Central Agency for Public Mobilization and Statistics (CAPMAS) belief of providing comprehensive and consistent socioeconomic data as a basic requirement on setting an applicable national strategic plan. Presenting such data in a certain design that enables researchers and analysts to build mathematical models in order to attain the proposed results more accurately. The Computable General Equilibrium Model (CGE) is one of the most elastic models in making future predictable scenarios, which has a great benefit in studying the impacts of economic decisions and policies on the economic and social variables of the society.

CAPMAS is pleased to release the Egypt SAM 2010/2011 on Monday, 17th August 2015, the celebration will be organized at Marriott Hotel (Ayda Hall) in Zamalek – Cairo. The events shall commence at 10.00 p.m. the attendance of elites of economic experts, academicians, analysts, and researchers.

The SAM considers one of the most important economic analysis instruments as it shows all interlinked relations and economic transactions among all organizational sectors in the national economy from one hand and between such organizational sectors and the Rest of World (ROW) from the other hand. The SAM provides data about the national economy in order to help the economic analysts, planners and policy makers in analyzing, assessing the economy performance and building the economic models.

Egypt SAM 2010/2011 has been constructed in cooperation with the International Food Policy Research (IFPRI Institute) in Washington, DC and the World Food Program (WFP) and under the technical supervision of academician experts in the Egyptian Universities.

SAM will be available for users at CAPMAS website commencing from Monday, 17th August 2015.
